DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Saari et al. (US # 6,532,035).

Art Unit: 2622

As to claim **1**, Saari et al. teaches a communications terminal (Figures 1-5, communication terminal “10”) comprising a multidirectional image acquisition system (Figure 10; Col. 7, Lines 26-31, “...so that the direction of imaging is through the close-up lens...”); said image acquisition system having image capture means (Figure 10, image capturing means “72”), at least one optical lens (Figure 10, lens “76”) and reflection means (Figure 10, flat mirror reflector “84”) providing the image to the image capture means (Col. 7, Lines 30-32); said reflection means being rotatably mounted around the optical axis of the image capture means (Col. 7, Lines 24-26, “...arranged for pivotal movement...”), wherein said reflection means are located on the optical path between the optical lens and the image capture means (Figure 10).

As to claim **2**, Saari et al. teaches the communications terminal according to claim 1, wherein the image acquisition system is a cylinder split into two portions (Figure 10; *{The examiner interprets the cylinder as a cylindrical space containing the lens, mirror and camera body.}*); a first portion having the lens and the mirror and a second portion having image capture means connected on the terminal (Figures 1-5 and 10).

As to claim **3**, Saari et al. teaches the communications terminal according to claim 2, wherein the second portion of the cylinder is permanently fixed on said terminal (Col. 5, Lines 65 and 66).

As to claim **4**, Saari et al. teaches the communications terminal according to claim 2 wherein the first portion of the cylinder making up the image acquisition system is rotary with respect to the second portion of the cylinder (Col. 7, Lines 24-26, “...arranged for pivotal movement...”).

Art Unit: 2622

As to claim **5**, Saari et al. teaches the communications terminal according to claim 1, wherein the image capture means are a sensor or any other light-sensitive device (Figure 10; Col. 7, Line 36, optical path implies sensitive to light).

As to claim **6**, Saari et al. teaches the communications terminal according to claim 1, wherein the reflection means are a mirror (Figure 10, flat mirror reflector “84”), or a prism, or any other reflecting system of miscellaneous shape and composition.
